

A photograph showing a car fire on a road. Several emergency responders are present, some holding red fire extinguishers. The scene is smoky and the fire is intense.

Knowledge is POWER

SOLUTIONS INCLUDE:

- + **CAD FUSION**
Quickly link unlimited Computer Aided Dispatch systems together to get real-time views of neighboring agencies calls.
- + **GEO FUSION**
Connect different GPS, location and mapping systems together for real-time views of neighboring agencies resources.
- + **RMS FUSION**
Connect different Records Management Systems together to share real-time information.
- + **MAPPING and MAP FUSION**
High definition mapping with real-time information including markers, vehicles, labels, geo-fences, navigation and features.

DATA INTEROPERABILITY SOLUTIONS THAT REDUCE RESPONSE TIMES AND ENHANCE COMMUNICATIONS

When first responders can't communicate during an emergency or critical event, lives can be in jeopardy. FATPOT fusion software was created to improve public safety data interoperability. For over 10 years, FATPOT has seamlessly connected disparate software systems to give first responders real-time information and situational awareness across boundaries and jurisdictions. No matter the vendors or versions involved.

FATPOT fully supports the SAFECOM® Interoperability Continuum. Our software platform provides two-way standards-based sharing, the ideal solution for data interoperability. This approach shares information seamlessly while supporting a many-to-many relationship with all software applications involved. This way, agencies and their first responders continue to use their own systems with the benefits of being connected to others.

The Ministry of Health relies on FATPOT's CAD Fusion software to provide a results-driven and integrated health system.

The FATPOT logo, with "FATPOT" in large, bold, green letters and "mission critical software" in smaller, grey letters below it.
